So I thought we need an app for this. I searched for an official API and any stuff related to this but I couldn't find something. That's where it ended. Well... until my developer mentality came out and I had to find a workaround. When you can't find an official API build it yourself. At least that's what I did here. I started getting the data I needed from the website step by step until I could use and show all the data in an app. Used Technologies If you aren't interested in development or how the app works under the hood you can skip this part:) The app uses a self build API using site scraping. This is done on multiple ways. First it tries to do that on the device, however if the site can't be reached because it's blocked by the users DNS for example then it fetches the data using a fallback built with WrapAPI. This way the user doesn't need a custom DNS or a VPN or any other type of workaround if Burning Series is blocked by their internet provider. Learn more about usual problems here Burning Series Domains. (That's the good part of an unofficial API!) Scraping the data using WrapAPI however is only done once a day to prevent exceeding the API rate limit. The data is then stored in a local database on the device using Room so the app can be used in offline mode and doesn't need to get new data every time. Images are stored in separate files on the device for the same reason. The data is emitted to the view lifecycle using Flow, you might find some small places where LiveData anymore and migrate existing usage to Flow as it's easier to use and maintain. Settings are saved using DataStore with Protocol Buffers. Pull Requests relying on LiveData or Shared Preferences or Data Store Preferences won't be accepted! Supported devices and Installation All Android smartphones with version >= 5.0 (Lollipop and up) as well as Android TVs are supported. To install the app head over to the Release Section and download the .apk file. For more advanced users is an .aab file provided which can be installed using bundletool. Installing the .apk file is easy, just copy it to your phone (or download it directly on your phone) and open it to install. If this won't work you can use ADB sideloading to install it from your phone. You can also download the app from F-Droid. Search on the internet if you face any problems. Don't ask for help here! Usage The usage is pretty self explanatory the screenshots below show some examples. Home All Favorites Series Contributing When you face any bugs or problems please open an Issue. To add functionality fork the project and create a pull request afterwards. You should know how that works if you are a developer:) You can add yourself to the list below if you want then. Maintainers Avatar Contribute to the project as well. This shows that the app is used by people and it's worth to maintain. Another way of supporting is to actually use the app and activate hoster, so you and other people can start watching without bothering. Page 2 Watch any series or videos on Burning Series easily with this app. You can see the latest series and episodes, get an overview of all available series, save your favorites and start watching directly inside the app. You can see login to your Burning Series Account because it's not using an official API. Read the Important Notice for more info. Important Notice This app is NOT OFFICIAL by Burning Series, that means it could break any time. Another way of supporting is to actually use the app and activate hoster, so you and other people can start watching without bothering. Devices running Windows Phone 7 Series software won't hit store shelves until later this year, but Microsoft

recently offered a peek into the upcoming OS at its MIX10 conference for developers and Web designers. The latest version of Microsoft's mobile platform promises to deliver a radical shift, with a new focus on features like social networking, the Web, and gaming. The new mobile platform comes not a moment too soon, as Microsoft looks to shed its image as an also-ran in the mobile space. Metrics firm comScore recently reported that, of the 42.7 million smartphone users in the United States, Windows Mobile user adoption had dropped by four points from 19.7 percent to maintain its 25 percent marketshare, while Google's Android grew by 4.3 percent to take 7.1 percent of the U.S., claiming 43 percent of smartphone users. The new mobile OS has several features designed to combat those shrinking numbers. For example, the Windows Phone 7 experience will be tightly integrated with popular Microsoft Office for mobile devices that includes OneNote and SharePoint Workspaces; and Windows Live Web-based services like Hotmail and Windows Live. Microsoft will also place a greater focus on hardware by forcing manufacturers to ship Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from changing the Windows Phone 7 devices with just three physical buttons: Home, Search and Back. Device makers will also be prevented from the physical buttons and the physical buttons are prevented from the physical buttons ar MIX10 were targeted at third-party application developers, but the company's talks revealed even more about how Windows Phone 7 users will interact with their phones. So without further ado, here's what's going on with Windows Phone 7 users will be able to take advantage of some of the same frameworks that iPhone Apps can, including an accelerometer for motion control, location-based services, multitouch, camera and microphone, and push notification. Push Notification? Uh-oh... You guessed it multitasking fans, Microsoft has taken a few ideas from the iPhone playbook with Windows Phone 7, and lack of multitasking is one of them. Just like the iPhone, Microsoft's OS will only allow third-party applications to run one at a time (with the exception of Microsoft's core Windows Phone 7 apps, called hubs). Instead, it will offer push notification, which lets a server send information to a mobile application, like an instant messenger or e-mail program, as opposed to having the app run in the background and then regularly call the server for updates. Microsoft has left the door open for multitasking to come to Windows Phone 7 Series in the future, according to Wired, but right now the company is too concerned about extending Windows Phone 7 battery life to allow it. Likewise, there are rumors that the iPhone may get multitasking with the next iteration of the iPhone OS. Marketplace Windows Phone applications from a brand new Windows Phone application from the brand new Windows Phone Applicati all applications before they become available in the Marketplace, according to Information Week. One interesting addition, however, is that Microsoft's Marketplace will feature a 'try before you buy' option. There aren't many details on how that will work, but Phone Arena is reporting the length of the trial will be left up to the developer. Software Development Kit Microsoft isn't calling it an SDK, but (just like the iPhone) Windows Phone 7 developers will be able to download a suite of "comprehensive tools" to help them developers will be limited to offering a maximum of 5 applications in the Marketplace. Windows Phone 7 third-party applications also won't be able to run as native applications on the new mobile devices. Instead, developers will use the Silverlight runtime environment and games will use the XNA Game Studio. Apps, apps, and more apps Just like any other mobile platform, the success of Windows Phone 7 may come down to the apps. Microsoft says many familiar mobile applications will be coming, including the Associated Press, Foursquare, Seesmic, Sling Media, Shazam and more. Check out PCWorld's sneak peek at Windows Phone 7 apps for more details. So what do you say? Are you looking forward to Microsoft's newest mobile platform, or is Windows Phone 7 Series too late to the mobile party for you to care? Connect with Ian on Twitter (@ianpaul) or on Google Buzz.
